

Male Parent Stock Lighting Guidelines

Housed on Lay Farm

| WEEK OF AGE | HOURS OF LIGHT | LIGHT INTENSITY |
|-------------|-------------------------|-----------------|
| W 1 - 14 | 12 | 4 FC/40 Lux |
| W 15 - 18 | Reduce 1 hr/wk to 8 hrs | 4 FC/40 Lux |
| W 19 - 23 | 8 | 4 FC/40 Lux |
| W 24 - End | 14 or Natural* | 3 FC/30 Lux |

- *Natural**
1. If Natural Daylight is less than 14 hours, during photostimulation; supplement with artificial light
 2. If Natural daylight is longer than 14 hours, use natural daylight hours for lighting schedule.
Do NOT decrease light hours at any time during the production cycle.
 3. For light controlled barns, hours of light can be increased by up to 3 hours (to 17 hours) by using strategically placed light “boosts” during the production phase.
